

Potential Research Projects for 2014 Applied Research

Riffle Beetle

Establishment of baseline distribution of Riffle Beetles and refinement of collection methods

Establishment of Riffle Beetle propagation methods in a Refugia setting - may already be included in Refugia research

Limitation of Riffle Beetle plastron use as applies to low flow conditions

Establishment of Riffle Beetle environmental tolerances related to low flow and resulting habitat utilization

Fountain Darter

When and where do darters move as vegetation decays and WQ deteriorates

Turbidity effects on Fountain Darter feeding
