### Evaluation of Information for this Finding

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations at 50 CFR 424 set forth the procedures for adding a species to, or removing a species from, the Federal Lists of Endangered and Threatened Wildlife and Plants. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1) of the Act: (A) the present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D)

the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence.

In making this 90-day finding, we evaluated whether information regarding threats to each of the 192 species, as presented in the petition and other information in our files, is substantial, thereby indicating that the petitioned action may be warranted. Our evaluation is presented below. For each species, we fully evaluated all information available to us through the NatureServe website, information cited in NatureServe available on the Internet or in local libraries, and other

information readily available in our files.

### Species Placed in Categories A and B for Which Substantial Information Was Not Presented

Factor A, The present or threatened destruction, modification, or curtailment of a species' habitat or range: For each of the species we placed in Categories A and B (Table 1 above), no information was presented on threats specific to the species or their habitats; therefore, we find the petition, including all available references and the NatureServe species files, does not present substantial information that the present or threatened destruction,
