

Options to: (a) increase flow at the Springs during drought: and, (b) protect the species

Note: External water (transbasin) or water newly made available (e.g., conservation or change in use) does not contribute to the species unless such water is tied, directly or through management, to spring flow

Associated activities that facilitate implementation and reaching consensus on Covered Activities (for example, program funding, management or incentives)

EARIP Work Flow and Tasks Toward Permit Issuance

Rev 09 Oct 09 (Ver8)

Note: for simplicity, most feedback loops and interconnections are not shown.
